docker-compose, there may be maven plugin

I'll look into setting up a docker image, is there a Linux distro you'd prefer?

- Assignee set to Nick Naglich

I hoped you would :)
Debian 10 I think.

I've tried compiling on both a Debian and Ubuntu docker container, running into issues with the surefire-plugin

```
[ERROR] Failures:

Hehe <https://redmine.vrspace.org/issues/109> strikes again :)

You can simply build it with -DskipTests but we should use this opportunity to fix that.
How do you build this image, can you send me that compose file and/or some howto?
Or, give me access to your server, or I give you access to vrspace.org server - whatever it takes to reproduce this.

Almost the same, yeah. This is failing on the server tests which it looks like Nate was able to get past.

You can simply build it with -DskipTests but we should use this opportunity to fix that.

Or, give me access to your server, or I give you access to vrspace.org server - whatever it takes to reproduce this.

It builds with the -DskipTests, yeah.

I'm using Docker Desktop for Windows 10 to pull the Debian Image and then install "git, bash, java, maven, and the VRSpace repo"
This is my first run trying to make a docker image from scratch and still figuring things out, so not sure how to share it yet.

#6 - 03/06/2022 03:54 PM - Josip Almasi

Never did it myself either.
I believe that's exactly what I need to get it reproduced.

#7 - 03/11/2022 01:28 AM - Nick Naglich

I created a dockerfile and "How To" in the forums:
<https://redmine.vrspace.org/boards/2/topics/226>

If you run through all the steps, but leave out the -DskipTests when compiling you'll get this error for debugging

#8 - 03/11/2022 02:26 PM - Josip Almasi

Great stuff, I'll try it over the weekend.
