I am working on Kubernetes.			
In the pod, in the Hosts file add :			
199.232.192.215 repo.maven.apache.org			
That way you are sure to reach maven repo.			
The OpenJDK 11 is already installed on my pod, so sorry for this part.			
But it is the DEB file and same, I need maven so :			
apt-get install -y maven			
git clone 'https://github.com/jalmasi/vrspace.git'			
cd vrspace/			
mvn clean install			
I will test the server later.			
Thanks by advance.			
Best Regards.			
Benjamin.

Alright, good to know.

There's no need to open another support ticket every time. These are generally for tasks etc, it's OK to open start a thread on the forum.
