Description			
Hello.			
Here my server. http://sleekdbzjc2mmjk-vrmeta-10335-01.bowyhodb87icqv29jzpy.ovh:8080/babylon/avatar-selection.html			
When I run the client button for VR, I have the creepy double screen and not my oculus running. But on the VRspace demo it is running just fine. I am using Metachromium as navigator.			
I am continuing my search from my side. I you have any idea, please get back to me.			
Thanks by advance. Best Regards. Benjamin.			

History

#3 - 08/28/2022 04:53 AM - Benjamin LIPERE

Also the login are not working proprely.

#4 - 08/28/2022 10:23 AM - Josip Almasi

- Status changed from New to In Progress

Works for me :)

If by 'login are not working properly' you mean login button, you don't need it at all. I.e. there's no login button on this page:

<https://sleekdbzjc2mmjk-vrspc1-30530-01.npiracncn3vqhcuv9gys.ovh/web/index.html>

Click on the button initiates oauth2 authentication. Setting it up on the server is rather straightforward, enter some application properties, but you have to register your app with authentication provider(s) first.

This is an interesting exception though, never seen that one, and google seems to know nothing about it.
When does that happen?

#5 - 08/28/2022 12:39 PM - Benjamin LIPERE

Hello.

Thanks for the URL.
Did not see that one.
Probably tunnel effect and lack of sleep.

As for the exception, it is when I want to connect in VR on the avatar-selection.html page.
The server is freezing and than the world is not loading.

Thanks by advance.
I am going to have some sport first.
Then I am going to continue.

Next loading a world.

Then item identification.

PS : How can I share my code ?

I am going on my own gitlab for the next.

Just making the repo public is okay for you ?

See you alter.

Best Regards.

Benjamin.

#6 - 08/28/2022 01:46 PM - Josip Almasi

Huh, what exactly do you mean by 'connect in VR on the avatar-selection.html page'?

Like, open the page on oculus quest?

I have to admit I've never tried it - I use apache as reverse proxy even in my local setup, so both SSL and HTTP/2 terminate on apache.

Quick look at tomcat changelog hints that enabling HTTP/2 in tomcat may not be the smartest idea - plenty of related fixes, and we have 9.0.54 embedded.

<https://tomcat.apache.org/tomcat-8.5-doc/changelog.html>

So I think simply disable HTTP/2 and try again. Look for `server.http2.enabled` in `application.properties`.

Re publishing your changes, definitely the simplest way is to fork on github, we'd do PR and merges if you want to contribute.

I'm not sure how it works with gitlab-to-github, but I'm willing to try. Quick googling gave me

<https://stackoverflow.com/questions/56486140/gitlab-merge-request-into-github>

And, hey, welcome! :)

#7 - 08/29/2022 03:28 PM - Benjamin LIPERE

Hello.

Well disabling http2 is apparently working.

What editor are you using for creating the scene of a world, please ?

I need something easy because I am a clunch/super nob in 3D modeling.

I just re-open blender, and I am lost.

Thanks by advance.

Best Regards.

Benjamin.

#8 - 08/29/2022 04:02 PM - Josip Almasi

Dang, thanks for confirmation. OK I'll make sure http/2 is disabled by default.

Yeah I don't get 3D programs either. Essentially, I edit js files in eclipse, and move inlined 3d models around. Like this:

<https://www.youtube.com/watch?v=705BDz0wSlQ>

Another option is vrspace world editor: <https://www.youtube.com/watch?v=d0v8IPCt4Mc>

Third one is mozilla spoke, related ticket here: <https://redmine.vrspace.org/issues/112> discussed here:

<https://redmine.vrspace.org/boards/2/topics/205>

The way I see it, vrspace world editor is the way to go (of course), needs plenty of improvements.

#9 - 08/31/2022 05:29 PM - Benjamin LIPERE

Hello.

Euh, Okay, I am going to have a teammate for 3D scene, probably.

Meanwhile, how about upgrade the framework until we have something like this :

<https://assetstore.unity.com/packages/templates/systems/vr-interaction-framework-161066>

A very simplified version.

Of course, I am doing the work, code open-source (for the engine at least, if we do something after that, it can't be open-source) and you just answer some question on this redmine until I have full autonomy on the subject.

???

Thanks by advance.

Best Regards.

Benjamin.

#10 - 08/31/2022 09:32 PM - Josip Almasi

Sounds good.

There's nothing especially physics-heavy in the video, that's quite doable. You should probably start here:

<https://doc.babylonjs.com/divingDeeper/physics>

Everything about WebXR here: <https://doc.babylonjs.com/divingDeeper/webXR>

You'll find plenty of examples there, including physics and grabbing: <https://doc.babylonjs.com/divingDeeper/webXR/webXRDemos#other-demos>

It gets more complicated with multiuser, but your mate and you should be able to throw boxes at each other reasonably soon. Design thinking is about what kind events to share, e.g. do not share position of a box, but share event 'box starts flying there'.

Please use forums rather than issues: <https://redmine.vrspace.org/projects/vrspace-org/boards>
